

Home Educator Express

Hello, THSC Friend,

🍁 **November is here! We are almost to the finish line of the semester!**

📅 Some wonderful advice I received about this time of year is to really take a look at your child's curriculum progress. Remember that in homeschooling, we are all about learning and going forward, not necessarily doing every single workbook page in a curriculum.

🏃 **If your child is thriving and thoroughly understands all the material, feel free to sprint ahead to a place where they are more challenged!**

▶ For instance, if they are a sentence diagramming whiz and the curriculum is asking them to identify proper nouns again, skip ahead. If they know all the multiplication tables backwards and forwards in their sleep and the workbook is reviewing (again...), you have permission to skip ahead.

😊 Finishing early is always better than slogging through. And, much more fun, too!

[illegible]

🍪 Just for good measure, [here are a bunch](#) of other fun, free printable November unit studies from [Freedom Homeschooling](#). Invisible ink science activity using cranberries, a pumpkin pie math lesson on fractions - we've got you covered!

Thank you for reading,

George Jonell

Jessica Lovett
THSC Lead Editor & Writer

"Be patient, then, brothers and sisters, until the Lord's coming. See how the farmer waits for the land to yield its valuable crop, patiently waiting for the autumn and spring rains. 8 You too, be patient and stand firm, because the Lord's coming is near."
-James 5:7-8

What Grades Are You Teaching?

Did you know that we have newsletters especially designed for elementary school, middle school, and high school students?

We know that your students have different levels, learning styles, and needs. Sign up today and get fun ideas delivered to your inbox to keep homeschooling fresh!

You can sign up for one or all of them, depending on the ages of your students.

Elementary

Middle School

High School

Being “no good at math” is a myth!

With [CTCMath](#), all of your students can learn based on simple building blocks that are presented in bite-sized pieces.

Unlike most other subjects, with math the rules and principles build on each other, step-by-step.

This means that even if one thing is missed or not understood, the crucial building blocks are missing.

That's what makes it tough for your students to understand math going forward!

CTCMath makes sure that nothing is missing, so your child can successfully move forward in their math lessons without a hitch.

Whether your kid needs to catch up, keep up, or move ahead, with CTCMath they can finally understand math and work at their own pace.

CTCMath is offering *Home Educator Express* readers a [half-price discount plus a bonus of 6 months](#) when you register for a 12-month membership. That means you have access to a complete online homeschool math curriculum for all your kids for 18 months total!

How To Teach Children About Voting (Includes Homeschool Study Guide)

While many of us may not start thinking about upcoming elections until we are bombarded with campaign ads, teaching children about voting actually starts months in advance. Under the age of 18 is the perfect opportunity to learn the ins and outs of the electoral process to build a strong foundation in responsible citizenship.

We have some great ideas on how to get your family engaged - and keep them engaged - in the democratic process.

Teach Your Kids About Voting

Your Guide to Free College Courses Online

Did you know that you have the opportunity to not only take online college courses which have just as much educational value as in-person courses, but also that there are actually free options available?

Free courses are offered in everything from grammar and music composition to higher mathematics and engineering!

Many colleges and universities offer online courses that are completely free! The catch is that some charge a small fee to have the course applied to an official college transcript or to be used as transfer credit. Some also cannot be transferred to other schools as credit but are still useful for general educational pursuits or career training. Whether or not they can be transferred, all the courses listed in our guide are free of charge if the student simply wants to improve their skills in a particular area. These college courses could even be used as a more advanced alternative to high school courses.

Courses are taught by professional educators and can add a whole new level of depth to your homeschool! Ignite your student's passion for a subject and check one of these out today!
